Simulated Weapons Training for Professionals

TRG

Tactical Rubber Guns

MADE IN JAPAN 

TRG are advanced precision molded rubber guns employed for intense training scenarios, common to the military and police. These reproductions are a molded steel component core encased by rubber materials featuring polyurethane and synthetic rubber. These have been designed and engineered with focus on safety, and attention to detail. Careful attention has been made in preserving the weapons authenticity accurately, a fundamental operational requirement for utilizing the rubber gun. These industrially designed rubber guns offer simultaneously “real situation” training and the added benefit of safety and unmatched reliability.

design & manufacture

Use of TRG products eliminates the necessity for maintenance and quality control issues for live fire weapons.

■ Safe operational focus

TRG Training products are ergonomically designed for safety, reliability and ease of use in even the most combat demanding scenarios. The engineered “ergonomic molding” facilitates ease of use while insuring an added safety factor. The “rounded design elements” of specific parts increases safety as an instructional tool. This innovation has increased the overwhelming ease of employment in training under various training conditions by the use of specific rubber hardness settings. TRG products have been fabricated using an industrial design process employed when replicating real weapons, which differs considerably from the generic knock-offs, which are readily available.

■ Wide range of application

1. Proper Gun handling training
2. Perfection of correct shooting postures
3. Multi-functional Combat Scenarios Training
4. Tactical Training and Combat Maneuvers
5. Amphibious maneuvers, underwater training
6. Advanced Ranger Training
7. Training for Reserve Soldiers

■ Vision

We, as a focused company, will endeavor to provide a wide range of Rubber Guns and equipment for training of Global military and police organizations. Additional training products may be obtained through special orders, not limited to weapons and firearms.

TRG products have been fabricated using an industrial design process employed.
